

# User Manual For Cloud Sense Vis

## 1. Login/Signup:

To use the app, open it and **log in with your email and password**. If you don't have an account, tap **Sign Up** first. After logging in, you will directly see your list of devices.

You can tap any device to view its live data and graphs. Green means the device is working, red means it is offline. You can also search for a device if you have many.

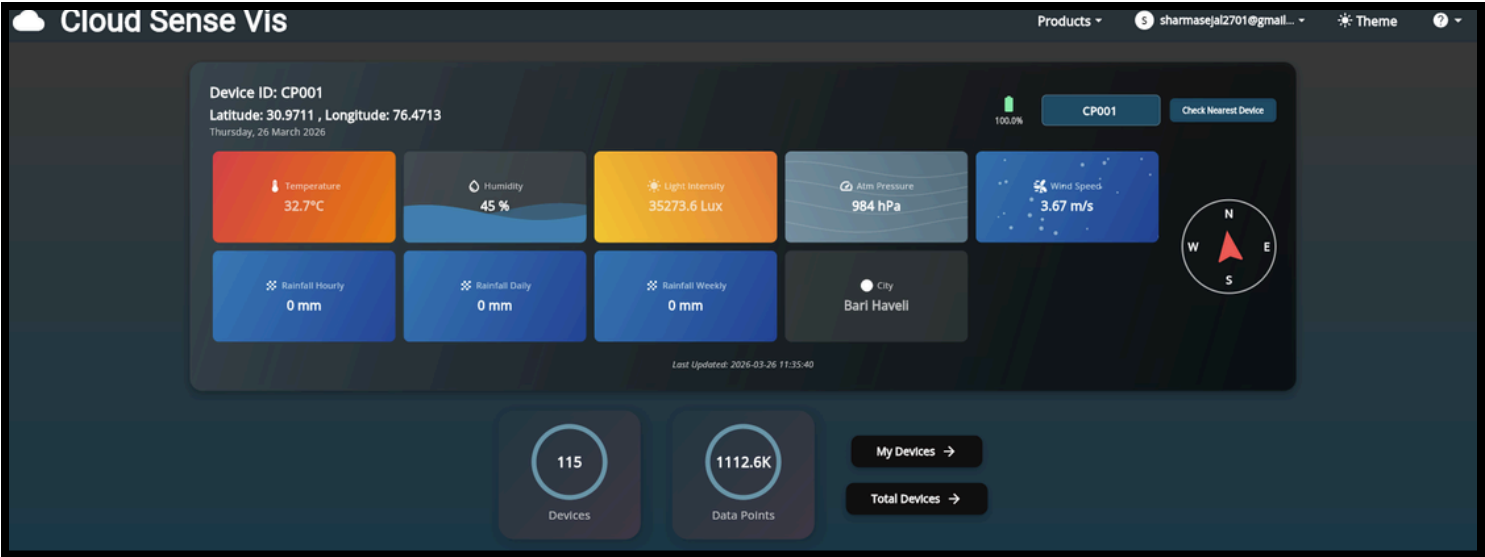

If you forget your password, tap **“Forgot Password?”** on the login screen and follow the steps.

## 2. Dashboard:

After you log in, you will land on the main screen. To see all your devices, simply tap on **“My Devices”**.

On the My Devices screen, you will see all your registered devices neatly displayed with their current status — whether they are Active (working) or Inactive (offline). You can also use the search bar at the top to quickly find a specific device by its ID or category.

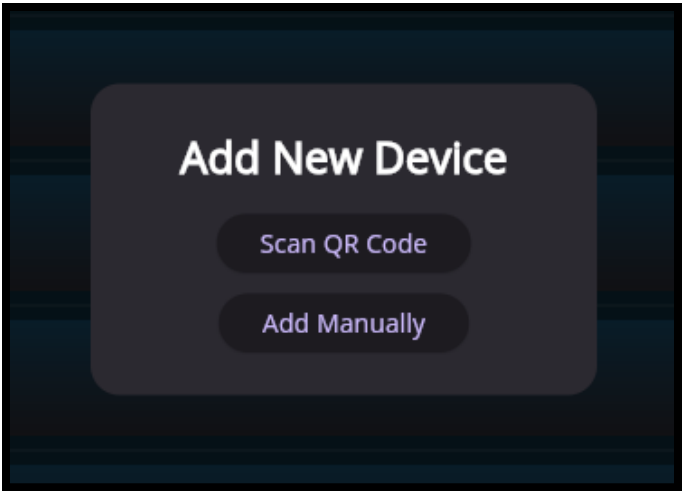

- To add a new device, simply tap on the **“Add Device”** option available in the app.

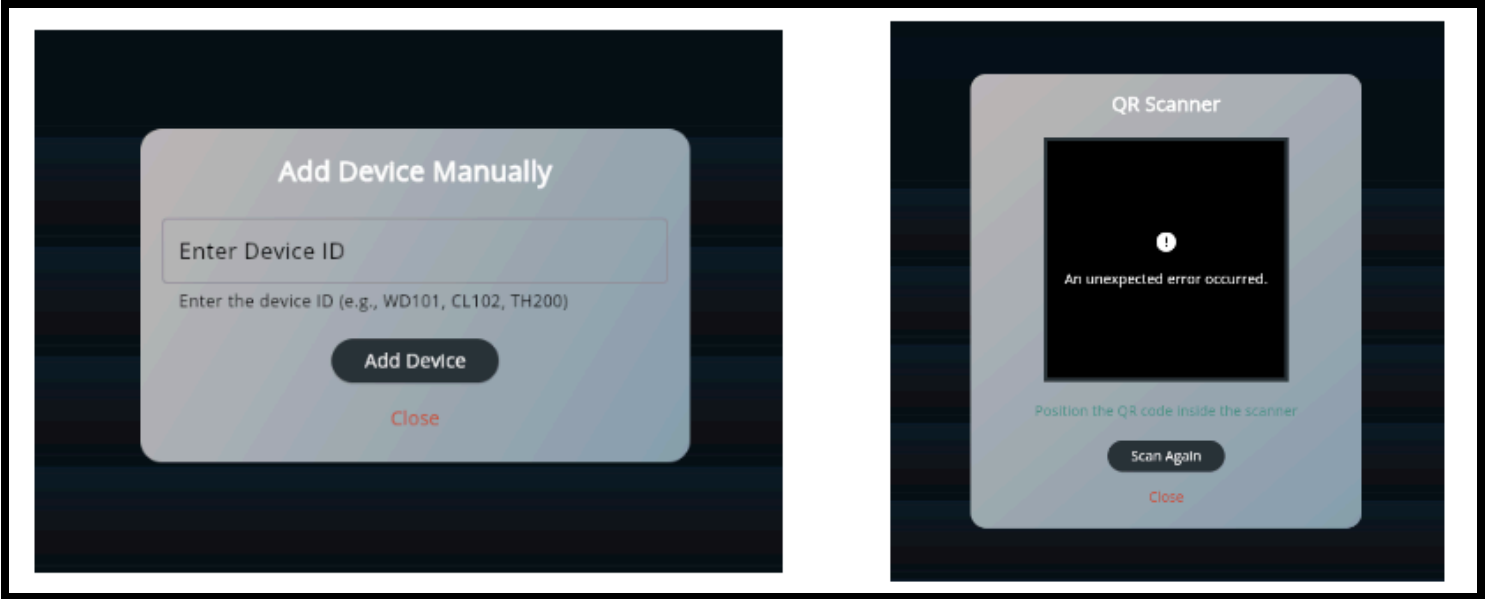

### 3. Device Management:

Once you tap it, a small box will appear where you can type the Device ID (for example: CP001 or SS005) or Users can scan a QR code to add new devices. This triggers an API call to add the device and associate it with the user’s UID.

To add a new device, tap the **“Add Device”** button (usually at the top right). You have two easy options:

- Type the Device ID manually (for example: CP001), or
- Tap the scan icon to use your phone’s camera and scan the QR code printed on the device or its packaging.

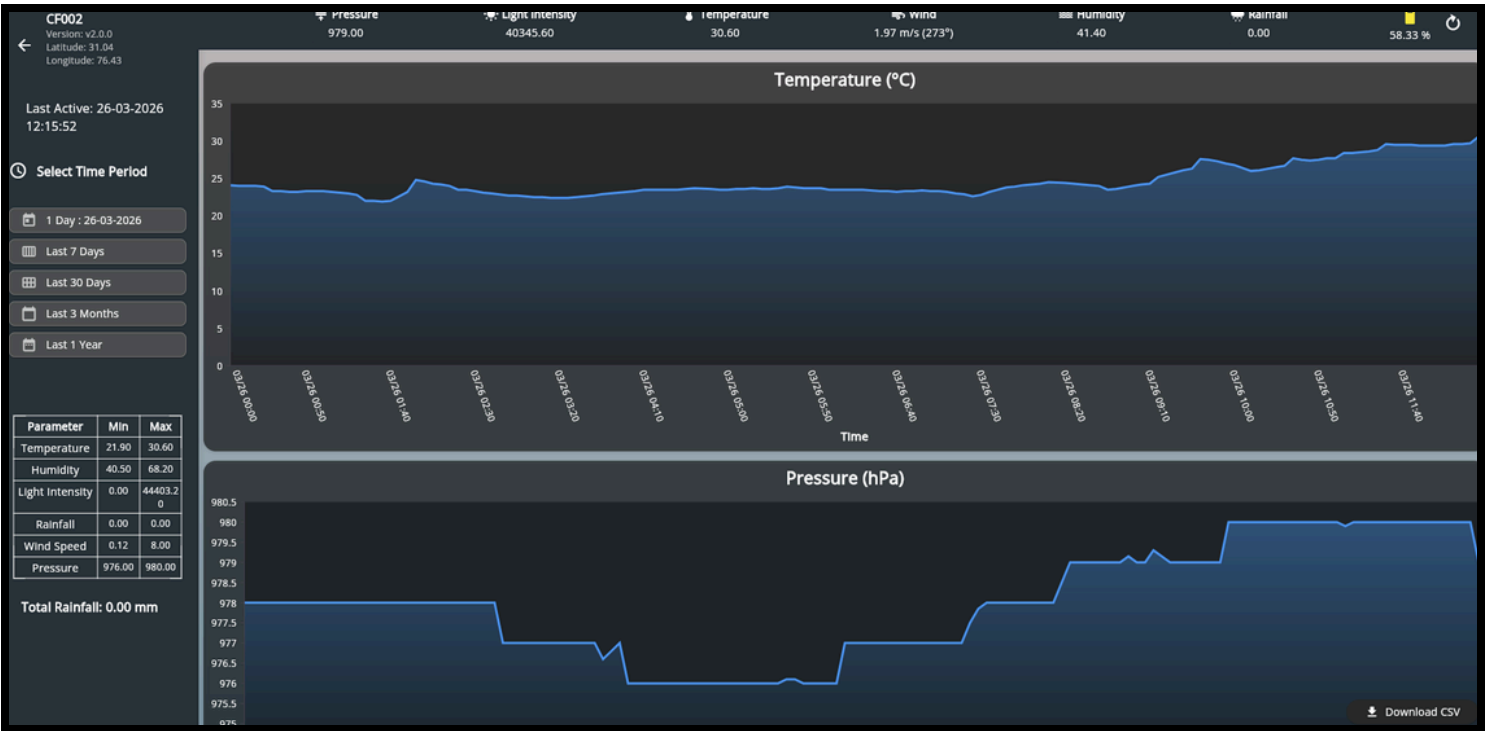

4. Graphs:

Once you tap on **any device** from the “My Devices” list, you will be directed to the Device Details page. This page provides complete information and **visual representation** of the selected device’s data.

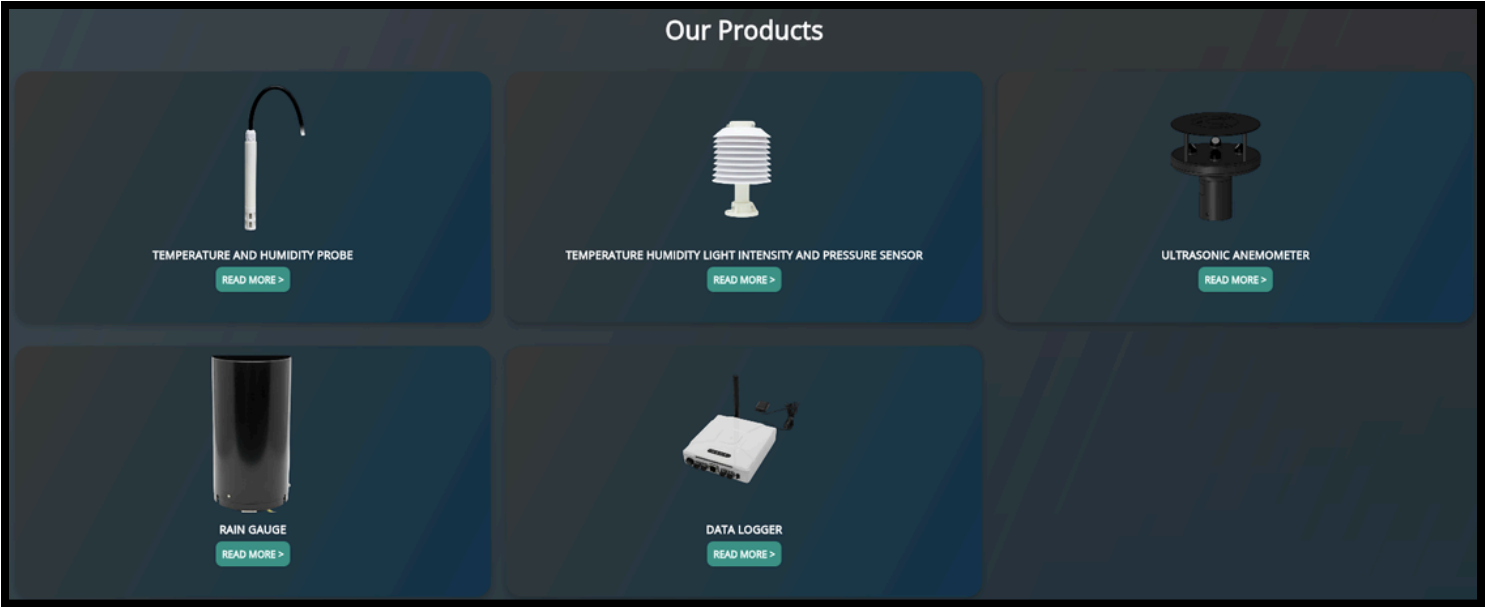

It displays real-time readings for key parameters such as Temperature, Humidity, Atmospheric Pressure, Wind Speed, Light Intensity, and Rainfall. The page also includes interactive graphs that show historical trends of these parameters. You can select different time periods – 1 Day, Last 7 Days, Last 30 Days, Last 3 Months, or Last 1 Year – to analyze the data.

Additionally, you can **download** the complete historical data in **CSV format** by clicking the “Download CSV” button.

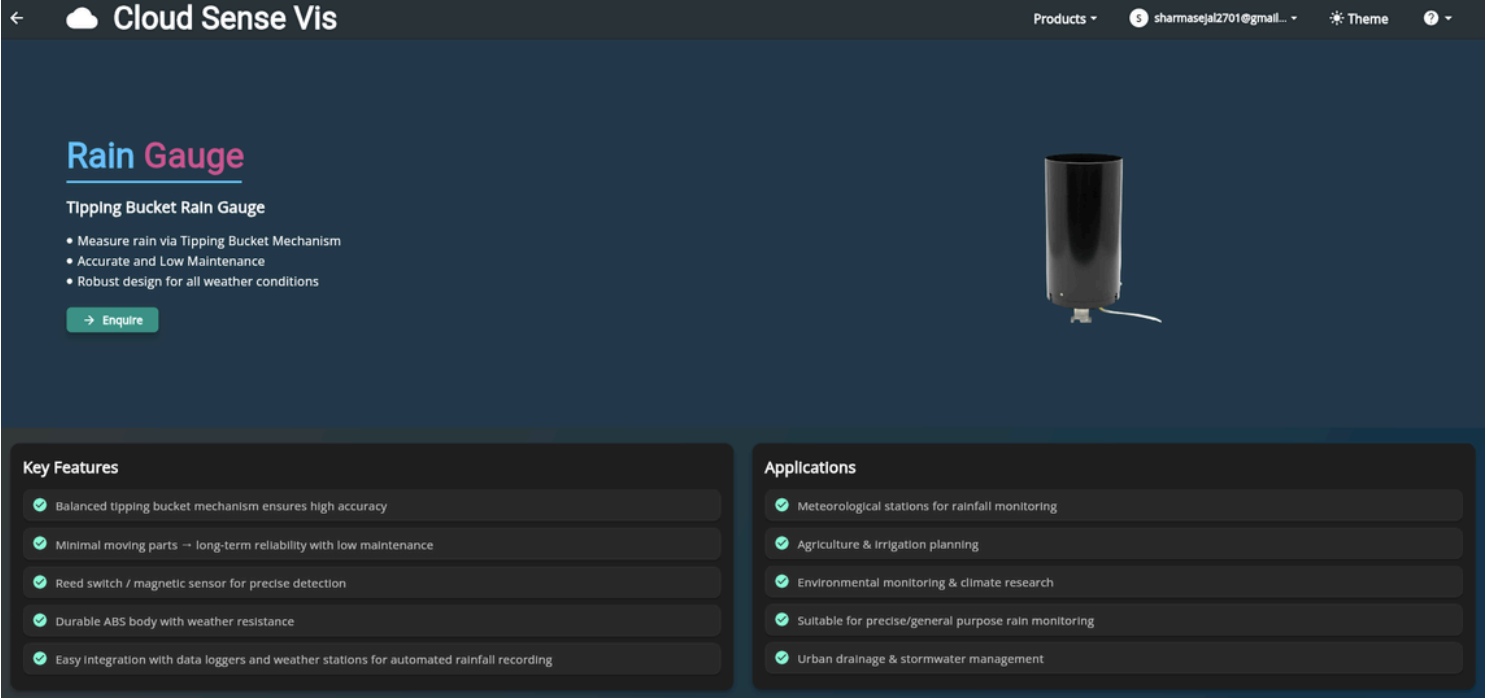

## 6. Products Section

Different products are also listed here. By clicking on **“Read More”**, you can view detailed information about each product.

This page provides complete information about the selected product, including its full name, key features, technical specifications, and real-world applications. For example, if you open the Rain Gauge, you will see details such as how it works (Tipping Bucket Mechanism), its advantages (low maintenance, high accuracy), and where it is commonly used (agriculture, meteorological stations, environmental monitoring, etc.).

The page also includes a clear image of the product and an **“Enquire”** button, allowing you to contact the team for more information or purchase.
